# CSP Guideline Programme Review

Dawn Wheeler, Ralph Hammond, Ceri  
Sedgley

Email: [hammond@csp.org.uk](mailto:hammond@csp.org.uk)

## Current work programme

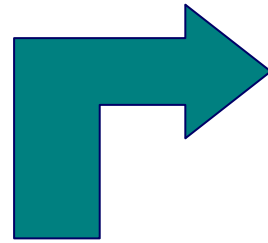

- Development
- Endorsement
  - reviewers
  - clinical guideline endorsement panel
- Publication
- 6 non-commissioned guidelines
- 2 commissioned guidelines

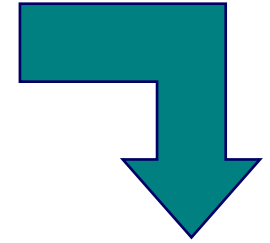

## Project aims and objectives

- Identify learning from the programme
- Engage members to understand their beliefs, experiences and ideas
- Resolve past problems
- Inform future ways of working

1. Identifying a need

2. Developing guidelines

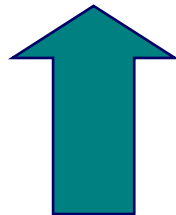

3. Ensuring rigour

4. Getting the guidelines into practice

6. Maintaining currency of the guideline

5. Has the need been met?

## Process

1. Write up notes & validate transcripts
2. Organise comments into themes
3. Discuss and agree emergent themes
4. Develop summary statements
5. Discuss and agree emergent vision
6. Validate against literature
7. Develop recommendations

## Quotations

- everyone is grappling with these issues – very welcome to see CSP is too
- process has to be quicker, while maintaining its rigour
- the guidelines need to be simply considered as statements of best knowledge at that time
- doesn't have to be a guideline – 'bite size' evidence [reviews]
- they are a long job, arduous, a nightmare, like giving birth to an elephant
- CSP is aloof, high minded, distant - should be encouraging, supporting

## Findings

1. Not all products have to be guidelines
2. Their status should be clear
3. Rationale linked to priorities
4. Development timely & transparent
5. Evidence-based implementation strategies
6. Continual programme improvement
7. CSP - led maintenance of documents

## Recommendations

1. Framework for producing material
2. Online central co-coordinating & mapping database
3. Active member promotion & engagement
4. Framework for all physiotherapy practice information
5. Active implementation programme to empower members

## So what will SKIPP do?

Establish transparent, explicit, equitable framework for development of evidence-based clinical material, supported by an on-line database

### PURPOSE:

1. collaboration between members and CSP
2. engage & nurture members to develop
3. capture & share knowledge
4. facilitate long-term development of the profession

## What sort of products?

1. Health technology assessments
2. Evidence notes
3. Consensus statements
4. Clinical guidelines
5. CSP position statements
6. Service exemplars
